> DynaMed

Otvoren je probni pristup bazi **DynaMed** (Dynamic Medical Information System) do kraja 2007. godine svim **medicinskim i zdravstvenim institucijama** koje su registrovane na servis EBSCO. Pristup bazi je preko stranice servisa [EBSCO](#) sa odgovarajućim user ID i Password-om.

DynaMed je utemeljena na naučnim saznanjima (evidence-based results) i pomaže u rešavanju medicinskih problema i odlučivanja u zdravstvu.

[Više informacija](#)

> EBRARY

Obaveštavamo Vas da je počeo probni period pristupa servisu [EBRARY](#) (elektronske knjige), koji će trajati do 04. juna 2007.

Omogućen je pristup kolekcijama Social & Behavioral Sciences i History & Humanities sa svim tehnologijama za pretraživanje koje nudi **ebrary** platforma. Za čitanje knjiga u ebrary servisu potrebno je instalirati ebrary Reader Software jednostavnim prihvatanjem uslova licence koja se pojavljuje pri izboru prve knjige.

Za računare na Akademskoj mreži potrebno je [podešavanje](#) proxy servera u Internet Browser-u. Ako imate otvoren proxy nalog, podešavanje nije potrebno.

Social constraints on female mate preferences in mallards, *Anas platyrhynchos*, decrease offspring viability and mother productivity

CYNTHIA K. BLUHM* & PATRICIA ADAIR GOWATY†

*Delta Waterfowl and Wetlands Research Station

†Institute of Ecology, University of Georgia

(Received 19 November 2002; initial acceptance 4 February 2003;
final acceptance 28 January 2004; published online 12 September 2004; MS. number: A9491R)

Constraints theory says that when individuals reproduce with nonpreferred partners, they will have offspring of lower viability than when individuals reproduce with preferred partners. To test this, we performed mate preference trials free of experimenter biases about what traits in males make them attractive to females. We eliminated social interactions that could manipulate or obscure females' choices, including interactions between males, between females, and between the sexes. We then randomly placed each female with either her nonpreferred or preferred male in breeding trials to determine how components of fitness for breeders and offspring viability varied. Offspring viability (the percentage of eggs surviving to 45 days posthatch) and mother productivity (mean number of offspring at 45 days posthatch) were significantly lower when mothers reproduced with their nonpreferred partner than with their preferred partners. This study adds to the growing list of species in which reproduction with nonpreferred partners is known to be costly to breeder and offspring fitness. It is among the few studies of birds and the only study of a species with forced copulation showing fitness deficits for offspring and mothers from enforced reproduction with nonpreferred males.

© 2004 The Association for the Study of Animal Behaviour. Published by Elsevier Ltd.

Constraints theory (Gowaty 1996, 1997, 2003; Gowaty & Buschhaus 1998) says that variation among females in their abilities to minimize or avoid altogether the effects of ecological or social limitations on their reproductive decisions results in female-female sexual selection. Forced copulation is a dramatic example of such a constraint.

Potts 1999) preferred partners. Predation risk causes previously choosy females to mate indiscriminately (Hedrick & Dill 1993; Dill et al 1999; Hedrick 2000; Johnson & Basolo 2003). If some females are able to avoid mating under predation risk, but others are not or do so less reliably, female-female reproductive competition over the

klasifikacija je napravljena prema Pravilniku o postupku i načinu vrednovanja i kvantitativnom iskazivanju naučnoistraživačkih rezultata istraživača, Službeni glasnik RS, br. 35/2007 (Detaljnije informacije možete pronaći na [sajtu ministarstva](#))

► Opisi disciplina (na engleskom)

Hemija, multidisciplinarna - Chemistry, Multidisciplinary includes resources having a general or interdisciplinary approach to the chemical sciences. Special topic chemistry resources that have relevance to many areas of chemistry are also included in this category. Resources having a primary focus on analytical, inorganic and nuclear, organic, physical, or polymer chemistry are placed in their own categories.

Informatika, multidisciplinarne primene - Computer Science, Interdisciplinary Applications includes resources concerned with the application of computer technology and methodology to other disciplines, such as information management, engineering, biology, medicine, environmental studies, geosciences, arts and humanities, agriculture, chemistry, and physics.

Primenjena matematika - Mathematics, Applied covers resources concerned with areas of mathematics that may be applied to other fields of science. It includes areas such as differential equations, numerical analysis, nonlinearity, control, software, systems analysis, computational mathematics and mathematical modeling. Resources that are concerned with mathematical methods and whose primary focus is on a specific non-mathematics discipline such as biology, psychology, history, economics etc., are covered in the MATHEMATICS, INTERDISCIPLINARY APPLICATIONS category.

Matematika i slično - Mathematics, Interdisciplinary Applications includes resources concerned with mathematical methods whose primary focus is on a specific non-mathematics discipline such as biology, psychology, history, economics, etc. Resources that focus on specific mathematical topics such as differential equations, numerical analysis, nonlinearity, etc., are covered in the MATHEMATICS, APPLIED category.
