Elsevier Research Intelligence portfolio

What we offer

CORE

SciVal (External View)

Ready-to-use tools to analyze the world of research, and to establish, execute and evaluate optimized strategies for the research organization.

Modules:

- Overview
- Benchmarking
- Collaboration
- Funding

Pure (Internal View)

Comprehensive research information management system to enable evidence-based decisions, promote collaboration, simplify administration and optimize impact.

Modules:

- Administration
- Reporting
- Import
- CV
- Award Management
- Assessment
- Portal (Experts, Institutional)

Analytical Services

Customized analysis, reports and services.

- Analytical Report Services
- Data Integration Services
- Reviewer Finder
- Custom Solution for Funders
- Scopus Custom Data
- Author Profile Refinement Services
- Fingerprint Engine

COMPLEMENTARY TOOLS AND RESOURCES

Scopus

The largest abstract and citation database of peer-reviewed literature; the broadest source of global, relevant scientific research, with tools that track, analyze and visualize research.

Mendeley

A free reference manager and academic social network that can help organize research, collaborate with others online, and discover the latest research, as well as other meaningful trends in global research activity.

What we support

ENABLE RESEARCH

Develop Strategy

Identify/Recruit Researchers

Secure Funding

Establish Partnerships

Manage Facilities

CONDUCT RESEARCH

Search, Discovery, Read, Review

Collaborate, Network

Experiment

Analyze, Synthesize

SHARE RESEARCH

Manage Data

Publish, Disseminate

Commercialize

Promote

Who we support

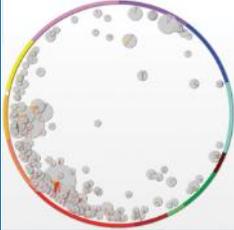

- **Research Institutions**
- **Funders**
- **Policy makers**
 - Provosts
 - Vice Chancellors Research
 - Research Administrators/ Development Professionals
 - Researchers
 - Research Managers
 - Department Heads
 - Librarians
 - Students
 - Communications Professionals
 - Technology Transfer Officers
 - Grant Managers
 - Legislators
 - Economic Development Officers

SciVal overview

SciVal Spotlight and Strata – the first generation

-  Approach

Spotlight

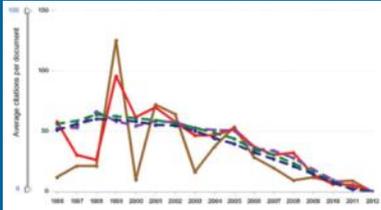

Innovative

**Pre-defined structure,
ready-to-go**

Overview / snapshot

**Updated annually
Institutions & countries
Show only strengths**

Strata

Traditional

**Flexible set-up, view and
interrogation**

Detailed / granular

**Updated weekly
Researchers & groups
Show everything**

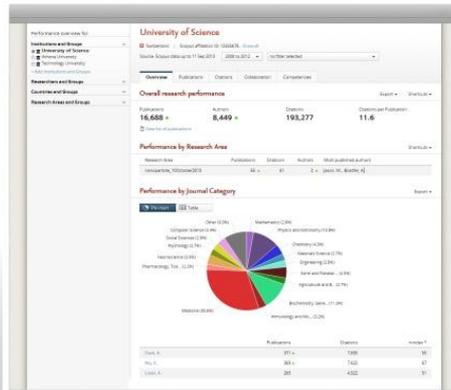

SciVal in a nutshell

SciVal offers quick, easy access to the research performance of 220 nations and 4,600 research institutions worldwide, and groups of institutions

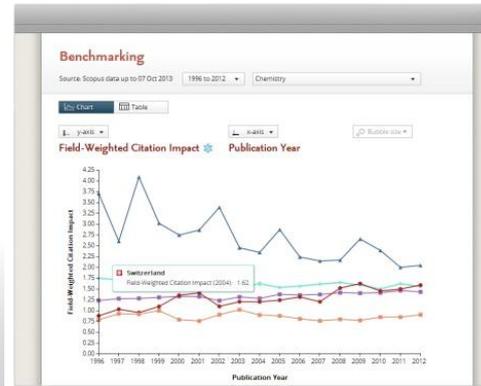

Visualize research performance

Ready-made-at a glance snapshots of any selected entity

Benchmark your progress

Flexibility to create and compare any research groups

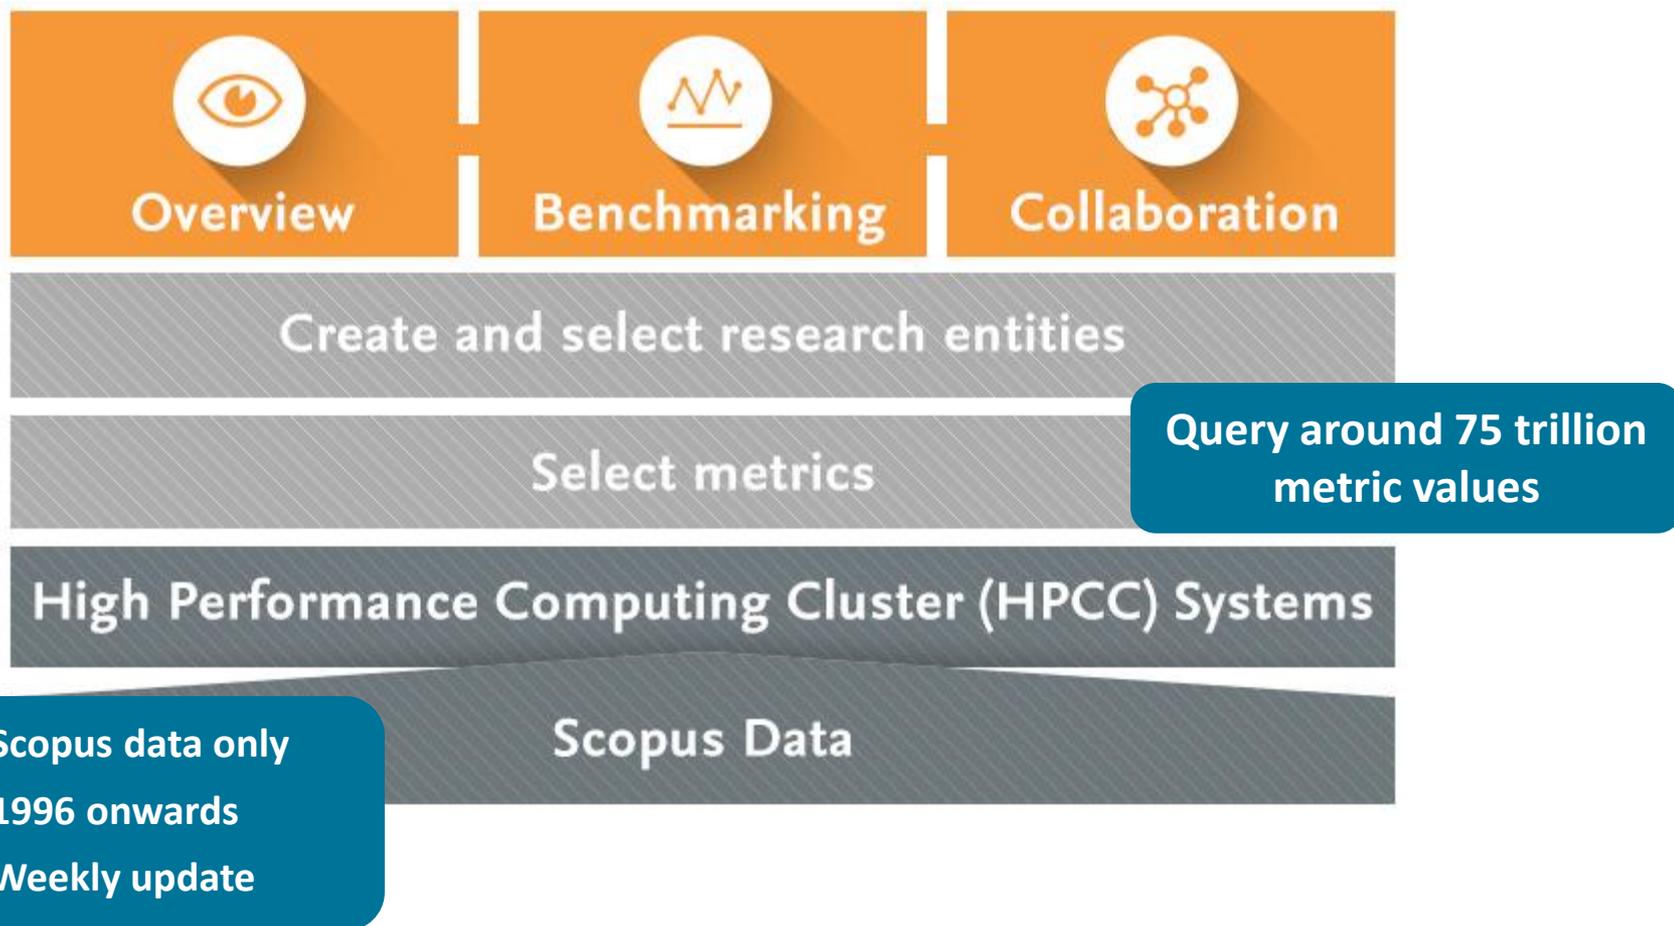

Develop collaborative partnerships

Identify and analyze existing and potential collaboration opportunities

The layers of SciVal

Using advanced data analytics super-computer technology, SciVal allows you to instantly process an enormous amount of data to generate powerful data visualizations on-demand, in seconds.

About Scopus®

Scopus

- The **largest** abstract and citation database of research information with over **53 million** records
- Updated daily, includes:
 - **21,000+ titles** from more than **5,000 international** publishers (independent review board)
 - **20,000+ peer-reviewed journals** (including 2,800 open access journals)
 - **367 trade publications**
 - **421 book series**
 - **30,000 books** (75,000 by 2015)
 - **5.5 million conference papers**
 - **"Articles-in-Press"** from more than **3,750 journals** and publishers
- Coverage of:
 - Life Sciences
 - Health Sciences
 - Physical Sciences
 - Social Sciences
 - Arts and Humanities
- Cited Reference expansion of pre-1996 references (back to **1970** by 2016)
- Independent journal metrics:
 - **SNIP**: The Source-Normalized Impact per Paper
 - **SJR**: The SCImago Journal Rank
- Connectivity with ORCID

What can SciVal do for you?

Benefits for a broad range of users

SciVal supports the needs of a broad range of institutional users by providing ready-made, at-a-glance snapshots for flexible, institution-specific insight

Vice chancellors of research

- 360 degree Performance Overview to inform strategic planning
- Identify institution's strengths and short-comings

Research administrators

- Create management-level reports
- Accelerate institutional and cross-institutional collaboration
- Support and win large grants

Department heads

- Evaluate researcher and team performance for recruitment and retention decisions
- Model-test scenarios by creating virtual teams

Researchers

- Raise visibility and highlight achievements
- Expand networks
- Locate collaborators and mentors

What are the questions addressed using SciVal?

“How can we demonstrate excellence in a way that best shows our unique strengths to secure funding and attract students?”

“I want to explore the various scenarios I’m considering to set up a centre of excellence. How can the data provide me with insights?”

“My VC is going to China; who do our academics collaborate with there and how can we expand?”

“I want to benchmark my institute, and my departments want to benchmark themselves. How can we all do this according to our different realities?”

Overview

“How can we demonstrate excellence in a way that best shows our unique strengths to secure funding and attract students?”

SciVal Metrics Guidebook

This comprehensive metrics guidebook is intended to be a straightforward, practical companion for you to find the right metrics to meet your objectives.

Example 4: Number of Citing Countries

Scenario: The user would like to calculate the Number of Citing Countries of an entity that consists of 6 publications. They have not selected any viewing or calculation options. Say that this entity has received 6 citations from publications A, B, C, D, E and F.

| | Entity with 6 Publications | | | | | |
|------------------------|----------------------------|---------------|---------------|---------------|---------------|---------------|
| | Publication 1 | Publication 2 | Publication 3 | Publication 4 | Publication 5 | Publication 6 |
| Cited by Publication A | Yes | | | | Yes | |
| Cited by Publication B | | | Yes | | Yes | |
| Cited by Publication C | Yes | Yes | | | Yes | Yes |
| Cited by Publication D | Yes | Yes | | Yes | | Yes |
| Cited by Publication E | Yes | Yes | | Yes | | Yes |
| Cited by Publication F | | Yes | | | Yes | |

Scenario: The citing publications A, B, C, D, E and F have the following affiliation information:

| Citing Publication | Affiliation | Institutions | Country |
|--------------------|-------------|--------------|---------|
| Publication A | A3 | 14 | C2 |
| Publication B | A1 | 11 | C1 |
| | A2 | 14 | C2 |
| Publication C | A1 | 11 | C1 |
| | A2 | 12 | C1 |
| | A3 | 11 | C2 |
| Publication D | A1 | 11 | C1 |
| | A4 | 11 | C1 |
| Publication E | A1 | 11 | C1 |
| | A2 | 11 | C1 |
| Publication F | A1 | 11 | C1 |
| | A3 | 11 | C4 |
| | A2 | 11 | C4 |

Question: How do I calculate the number of Citing Countries?

Answer: Count the number of distinct countries in the affiliations of the citing publications.

Number of Citing Countries = 4

4.9 Metric Field-Weighted Citation Impact

Field-Weighted Citation Impact in SciVal indicates how the number of citations received by an entity's publications compares with the average number of citations received by all other similar publications in the data universe; how do the citations received by this entity's publications compare with the world average?

- A Field-Weighted Citation Impact of 1.00 indicates that the entity's publications have been cited exactly as would be expected based on the global average for similar publications; the Field-Weighted Citation Impact of "World", or the entire Scopus database, is 1.00.
- A Field-Weighted Citation Impact of more than 1.00 indicates that the entity's publications have been cited more than would be expected based on the global average for similar publications; for example, 2.11 means 111% more cited than world average.
- A Field-Weighted Citation Impact of less than 1.00 indicates that the entity's publications have been cited less than would be expected based on the global average for similar publications; for example, 0.87 means 13% less cited than world average.

Similar publications are those publications in the Scopus database that have the same publication year, publication type, and discipline, as represented by the Scopus journal classification system:

- Publications can be assigned to a classification system in 2 ways:
 - "Journal-driven" assignment assumes that every publication within a journal fits within the same discipline(s) as the journal's scope. Each publication automatically adopts the subject classifications that are assigned to the journal. This method of assignment is suitable for journals that are focused in a core field, and do not tend to include publications that are also relevant to other fields.
 - "Publication-driven" assignment assumes that publications within a journal may have additional or different relevance to fields outside the core focus of the journal's scope. Publication-driven assignment offers the benefit of being able to assign individual publications from a journal separately to their relevant classifications. This is important for publications in multi-disciplinary journals.
- Field-Weighted Citation Impact uses "publication-driven" assignment
- Publications are allocated to the classification Sub-category level, and can be allocated to more than 1 Sub-category. When we calculate the expected citations for similar publications, it is important that these multi-category publications do not exert too much weight; for example, if a publication P belongs to both in both parasitology and microbiology, it should not have double the influence of a publication that belongs to only one or the other Sub-category. This is accounted for in SciVal by distributing publication and citation counts equally across multiple journal categories: publication P would be counted as 0.5 publications for each of parasitology and microbiology, and its citations would be shared equally between these Sub-categories.

- Understanding metrics
 - Scopus as data source
- Selection of appropriate metrics
 - What affects their values, besides performance?
- For each metric
 - Situations in which they are useful
 - When to take care and how to address short-comings
 - Worked examples

SciVal provides an option to:

1. create your own researcher groups (publication groups soon), or
2. as an optional paid service, have pre-populated groups of researchers added to SciVal as your institution's pre-defined entities. Elsevier will perform the manual refinement of researcher profiles to ensure appropriate matching of Scopus records to each identified researcher.

You can easily benchmark departments and teams by pre-populating the organizational hierarchy in SciVal

SciVal - Solution to your strategic planning challenges

Gain immediate access to view and analyze the world's research to:

- View the ready-made, at-a-glance snapshot of your research performance
- Benchmark your performance against any set of peers.
- Model test scenarios by creating virtual teams and newly emerging research areas...
- Establish collaborative partnerships locally or globally
- Track and monitor weekly to stay up-to-date with changes in the market

Pure: Comprehensive research information management

Consolidate

- Simplify research information management and reduce administrative overhead
- Capture data across the world of research

Validate

- Certify your research information as validated and reliable

Profile

- Create rich researcher profiles and publication lists on the fly
- Generate and share personalized CVs
- Achieve precise, current, reliable researcher profile publication lists with minimal effort

Report

- Build and share reports tailored to uncover actionable insights
- Streamline national assessment reporting (e.g. REF2014, BFI, ERA, SEP)

Analyze

- Track progress towards research milestones for groups and individuals
- Identify subject experts through the Elsevier semantic Fingerprint Engine™

Monitor

- Monitor your research grant life cycle and success rates

Showcase

- Pure's portals promote accomplishments and facilitate collaboration through expertise profiling and research networking

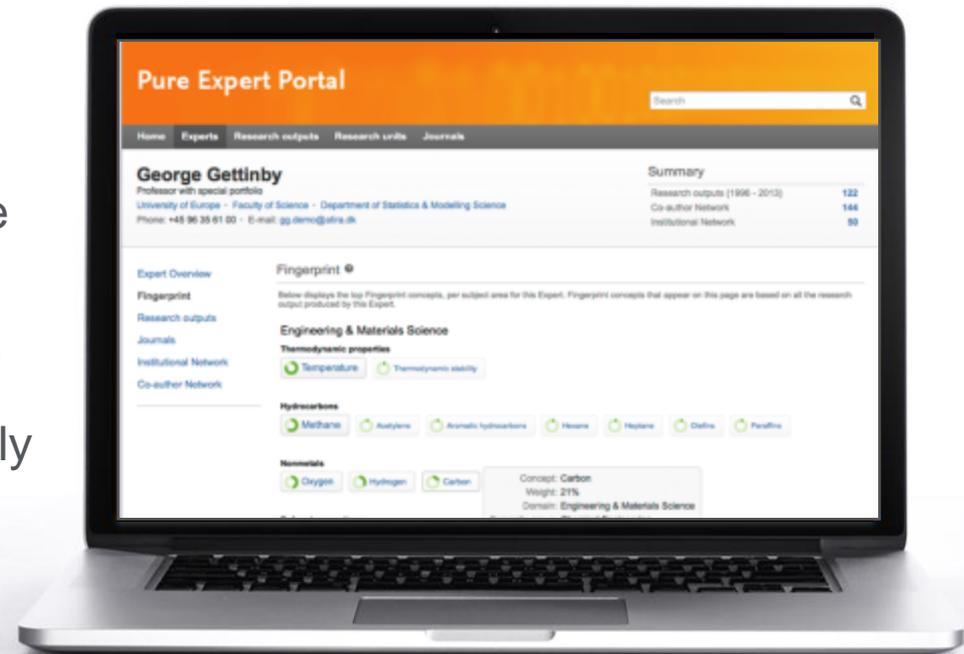

Pure combines internal systems, external data sources and legacy data into a single platform, providing a comprehensive view of your institution's research activities

Pure Experts Portal

Showcase and Discover Expertise:

- Demonstrate researcher activities and accomplishments to attract potential collaborators
- Discover more about the content written by other researchers
- Identify other researchers' distinctive expertise and find potential partners
- Facilitate collaborations by exposing publishing connections and make researchers' accomplishments readily discoverable

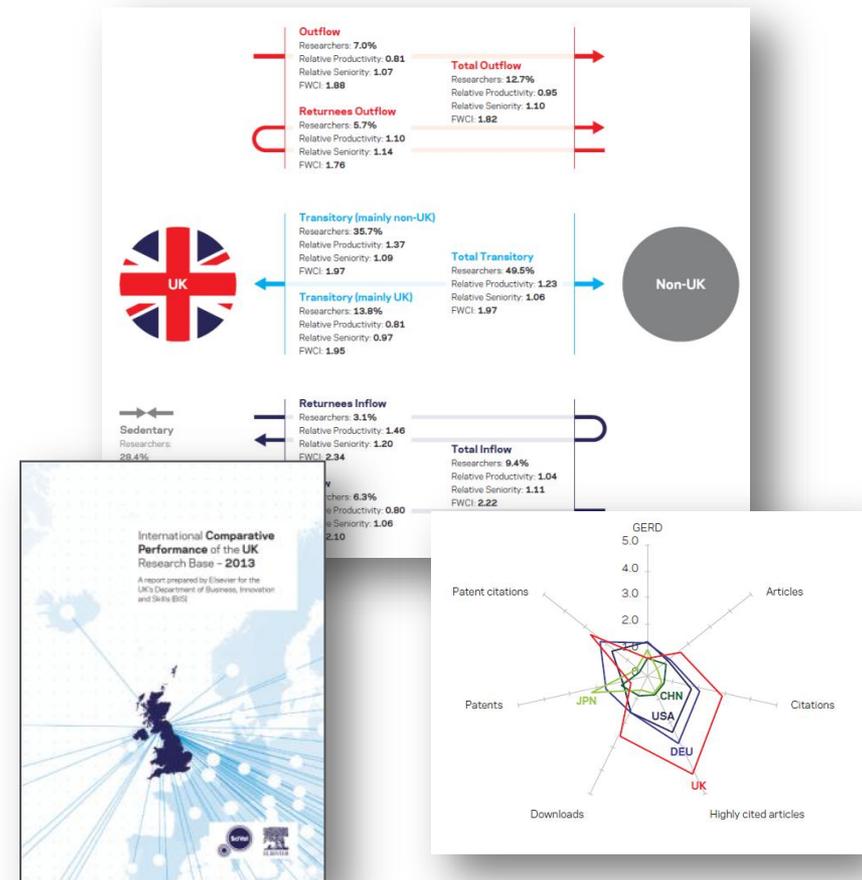

Every researcher profile delivers a comprehensive list of publications, coauthor and institutional networks, a list of similar experts and a semantic index, or Fingerprint™ visualization, of the researcher's distinctive expertise

SciVal Analytics – Tailored data and report services for measuring research performance

Make more informed decisions related to funding allocations, research policies and strategies

- Provides in-depth analyses in areas such as international comparative performance, ROI of funded projects, research excellence initiatives and research landscape studies
- Offers flexibility to choose data sources, select the time period, and identify who to benchmark against (peers, country, region and world)
- Select datasets from Scopus Custom Data to build an in-house database and perform your own analysis

Customized analysis and reports to measure research performance
